

Friends, even the animals give their testimony of the Creation of God. *See: Job 12:7-9.*

The Bible says that God made us for *fellowship* with Him. *See: Genesis 1:26 ; Psalm 100:3*

And that's why we actually owe Him our *worship*.

God's love, creative power and His creative interest in **you** are all absolutes! *See: Romans 8:38* Even if you have lost loved ones in death, God's care and concern is for **you**. *See: Isaiah 26:19*

God's Creative power is our guarantee that He loves us and will Recreate life for those who love Him. *See: Isaiah 65:17,18*

### My Decision

*I believe God not only has a plan for creation, but for **my** salvation that only comes by grace through faith in Jesus Christ.*

## THE VOICE OF PROPHECY SPEAKS

WHAT BIBLE PROPHECYSAYS ABOUT YOUR FUTURE

### BY CHANCE OR DESIGN! - # 7

The most profound verse in the Bible for modern man is *Genesis 1:1*, “**In the beginning God created the heavens and the earth.**” Yet, we are told today that this universe just jumped into existence all by itself! Just one-in-a-trillion evolutionary luck. But, when we look at nature we see **evidence** of a complex creation. *See: Isaiah 40:26* An increasing number of scientists are now conceding that “*Intelligent Design*” is a valid field of study. When you look into the face of every human being born into this world, you have evidence of intelligent design. *See: Psalm 139: 14*

When the forensic scientist looks for evidence of foul play in a suspected murder scene, the Pathologists is looking for “criminal intent” or an intentional act by an intelligent being. Or a person **behind** the evidence!

The Bible answers where we have come from and who we are with the word *Creation*. Friend, you either have to take the Bible's worldview, or settle for *existentialism*, which basically says that “Life is absurd, meaningless, and that the individual self must create his/her own meaning by his own choices.” Or *postmodernism*, which thinks that there are no eternal truths.

However, today even the world's best scientists are conceding something called the Anthropic Principle. For example:

- Raise or lower the universe' rate of expansion by 1 part per million, there would be no life.
- The force of gravity has to be right within one part in ten to the sixtieth power,
- If the average distance between stars were any greater, there'd be no planets.
- If you adjust the carbon-to-oxygen ratios even slightly, there'd be no one here to breathe.
- Tilt the earth's axis just slightly one way, we'd freeze to death, tilt the other way, we'd instantly burn up!

The **exact** and perfect values as seen in the universe see the evidence of "*Design*", and all the scientists and genome researchers know it! Chuck Colson in his book comments on the Anthropic Principal, "*All these seemingly arbitrary and unrelated values in physics have one strange thing in common: they are precisely the values needed to get a universe capable of supporting life.*"

The word "*anthropic*", actually means "human being". That's it! This Anthropic Principal reiterates that God cares about human being and has built this world just for our survival.

Now think on this. Did you know that the Bible earnestly invites us to *worship* God precisely because He is our Creator! *See: Revelation 14:7* And in

*Revelation 4:11*, we see that holy beings who have never sinned just worship constantly.

Physicists Heinz Pagels, in his book *A Cozy Cosmology*, suggests that if our universe "*appears to be tailor-made for life, the most straightforward conclusion is that it was tailor-made, created by a transcendent God.*" And then he confesses that, in their hearts, many scientists know it. But they find the conclusion "unattractive", and twist their own logic into pretzels, coming up with things like their "theory of multiple universes" to get around the problem. "*It is the closest that some atheists can get to God. In other words, atheists are squirming every which way to avoid the obvious.*" No friends, God is the Creator of all things. *See: Jeremiah 32:17*

The first Law of Thermodynamics actually works in favour of the power of God because it states that "*Matter cannot just pop into existence or create itself.*"

But some say, "*What about mutations of species over time as an argument for evolution?*" **Answer:** Mutations don't make things better; instead, we have a downward spiral of genetic mistakes. The Second Law of Thermodynamics states: "*That our universe is slowly wearing down, disintegrating, not spiraling upward into higher levels of complexity.*" This applies to the genetic code!

Luther Burbank, the great genetic researcher, coined an expression or law "the Reversion to the Average". Most organisms stay true to type. Variations tend to be minor. Monkeys seem to stay as monkeys.
